

APPOINTMENT	Postdoctoral Scholar in Prof. Shanhui Fan's group at Stanford University	
CONTACT INFORMATION	<p>Spilker Engineering and Applied Sciences, Box 249 348 Via Pueblo Stanford, CA 94305-4088, USA</p> <p>e-mail: wsshin@stanford.edu website: http://www.stanford.edu/~wsshin</p>	
EDUCATION	Stanford University Ph.D. in Electrical Engineering (advisor: Prof. Shanhui Fan)	2006–2013
	Stanford University M.S. in Electrical Engineering	2004–2007
	Seoul National University B.S. in Physics and Mathematics	1997–2001
INDUSTRY EXPERIENCE	<p>Park Systems, Suwon, Korea <i>R&D Staff</i></p> <p>Developed algorithms and software for scanning probe microscope (SPM) operation and image processing, including</p> <ul style="list-style-type: none"> • non-contact mode SPM algorithm on DSP • tip deconvolution algorithm 	2001–2004
HONORS AND AWARDS	Samsung Scholarship	2006–2011
	National Research Foundation of Korea Fellowship	2004–2006
	Summa cum laude graduate, Seoul National University	2001
	Merit-based scholarship, Seoul National University	1997–2001
	Bronze prize, the 18th Korea National Mathematics Contest for College Students	1999
	Silver medal, the 8th Korean Mathematical Olympiad (KMO)	1994
DOCTORAL RESEARCH DESCRIPTION	<p>My Ph.D. research spans two areas: efficient solution of frequency-domain Maxwell's equations in 3D, and design of nanophotonic components.</p> <p>Efficient solution of the frequency-domain Maxwell's equations in 3D I develop various techniques to improve the performance of iterative solvers of the frequency-domain Maxwell's equations in 3D. My techniques include</p> <ul style="list-style-type: none"> • using the perfectly matched layer (PML) boundary condition correctly • engineering the eigenvalue distribution of the Maxwell operator using the continuity equation • symmetrizing the Maxwell operator while preserving the condition number of the operator <p>Combining these techniques, I have achieved more than 300-fold speedup in frequency-domain Maxwell's equations solvers.</p> <p>Design of nanophotonic components Using the efficient Maxwell's equations solver, I design novel nanophotonic components. Components of current interest are</p> <ul style="list-style-type: none"> • plasmonic waveguide bend and splitter • plasmonic-dielectric waveguide coupler • nano-optical antenna

SOFTWARE
DEVELOPMENT

FD3D (Frequency-Domain solver of Maxwell’s equations in 3D)

FD3D is a parallelized computational kernel for solving the frequency-domain Maxwell’s equations in 3D. It constructs a linear system from Maxwell’s equations by the finite-difference method, and solves the linear system by a Krylov iterative method. FD3D is written in C using the PETSc library, and it runs on any LINUX clusters that support MPI communication.

Maxwell

Maxwell is a MATLAB user interface for FD3D. It produces input files for FD3D from problem specifications (such as electromagnetic properties and shapes of objects). It also reads solution files calculated by FD3D and visualizes them. In addition, Maxwell can solve the frequency-domain Maxwell’s equations using MATLAB’s built-in linear system solvers.
