Wonseok Shin, Ph.D.

As of June, 2014

Contact Information

Spilker Engineering and Applied Sciences, Box 249
348 Via Pueblo
Stanford, CA 94305-4088, USA

E-mail: wsshin@stanford.edu
Website: http://www.stanford.edu/~wsshin

Current Appointment

Postdoctoral Scholar — 2013–present
Prof. Shanhui Fan's group, Stanford University

Education

Ph.D. in Electrical Engineering (advisor: Prof. Shanhui Fan) — 2006–2013
Stanford University
Dissertation:
3D Finite-Difference Frequency-Domain Method for Plasmonics and Nanophotonics

M.S. in Electrical Engineering — 2004–2007
Stanford University

B.S. in Physics and Mathematics — 1997–2001
Seoul National University

Industry Experience

Software Engineer — 2001–2004
Park Systems, Suwon, Korea
Developed software for Park Systems' scanning probe microscope (SPM), including
- data acquisition software on Texas Instruments' digital signal processor in C
- control software on Microsoft Windows in C++ (VC++)
- image editing software (similar to Photoshop) in Java (J2SE)

Teaching Experience

Principal Instructor of EE 256: Numerical Electromagnetics — spring 2014
Stanford University

Honors and Awards

Samsung Scholarship, *Samsung Scholarship Foundation*	2006–2011
Graduate Study Abroad Scholarship, *Korea Science and Engineering Foundation*	2004–2006
Summa cum laude graduate, *Seoul National University*	2001
Merit-based scholarship, *Seoul National University*	1997–2001
Bronze prize, *Collegiate Mathematics Competition*, Korean Mathematical Society	1999
Silver medal, *Korean Mathematical Olympiad* (KMO), Korean Mathematical Society	1994

Patents

W. Shin and S. Fan, "Simulation of phenomena characterized by partial differential equations," under review by USPTO (serial number 13/744,999).

Research Overview

Efficient solution of the frequency-domain Maxwell's equations in 3D

I develop various techniques to improve the performance of iterative solvers of the frequency-domain Maxwell's equations in 3D. The techniques I have developed are

- correct formulation of a differential equation for plasmonics
- correct choice of the perfectly matched layer (PML) absorbing boundary condition
- engineering the eigenvalue distribution of the Maxwell operator using the continuity equation

Combining these techniques, I have achieved more than 300-fold speedup in solver performance.

Design of novel nanophotonic components

Using the efficient Maxwell's equations solver, I design novel nanophotonic components such as

- perfect bends and splitters in plasmonic waveguides
- efficient couplers between plasmonic and dielectric waveguides
- deep-subwavelength antennas with unidirectional radiation patterns

Analysis of the nature of the energy loss in plasmonic and metamaterial systems

The performance of plasmonic and metamaterial devices are limited by the energy loss in their metallic components. To understand the nature of the loss and hence to improve the performance of these devices, I explore the followings in plasmonic and metamaterial systems:

- efficient numerical solution of electromagnetic modes
- analytic expression of the modal loss rates
- fundamental bound of the modal loss rates

Funded Research Projects

Template-Directed Directionally Solidified Eutectic Metamaterials 2012–2015
Multidisciplinary University Research Initiative (MURI)
Sponsor: Air Force Office of Scientific Research (AFOSR)
PI: Prof. Paul Braun at UIUC

Integrated Hybrid Nanophotonic Circuits 2011–2014
Multidisciplinary University Research Initiative (MURI)
Sponsor: Air Force Office of Scientific Research (AFOSR)
PI: Prof. Mark Brongersma at Stanford University

Modeling, Computation, and Analysis of Optical Responses of Nano Structures 2010–2013
Collaborative Research in the *Division of Mathematical Sciences* (DMS)
Sponsor: National Science Foundation (NSF)
PI: Prof. Shanhui Fan at Stanford University

Robust and Complex On-Chip Nanophotonics 2009–2014
Multidisciplinary University Research Initiative (MURI)
Sponsor: Air Force Office of Scientific Research (AFOSR)
PI: Prof. Shanhui Fan at Stanford University

ACADEMIC SOFTWARE DEVELOPMENT

MaxwellFDFD http://www.stanford.edu/~wsshin/maxwellfdfd

Developed in MATLAB

MaxwellFDFD is a MATLAB-based package that solves the frequency-domain Maxwell's equations. It constructs a system of linear equations out of Maxwell's equations by the finite-difference frequency-domain (FDFD) method, and hence the name MaxwellFDFD. The constructed system is solved by MATLAB's built-in direct solvers. MaxwellFDFD has the following features:

- built-in frequency-dependent dielectric constants for commonly used nanophotonic materials
- dynamic nonuniform grid generation aligned with object boundaries
- waveguide mode solver
- visualization of objects and sources in 2D and 3D
- visualization of solution fields in 2D and 3D
- various object shapes: box, sphere, cylinder, etc., and their periodic array
- various types of source distribution: point, line, plane, rectangular, waveguide mode, etc.
- electric ($\mathbf{J}_e$) and magnetic ($\mathbf{J}_m$) current sources
- PEC, PMC, periodic, and Bloch boundary conditions
- uniaxial perfectly matched layer (UPML) and stretched-coordinate PML (SC-PML)
- total-field/scattered-field (TF/SF) method
- power flux calculation

FD3D http://www.stanford.edu/~wsshin/fd3d

Developed in C and Python

FD3D is a parallelized computational kernel for solving the frequency-domain Maxwell's equations. It is a companion program of MaxwellFDFD: users can easily generate the input files for FD3D from MaxwellFDFD, and read the solution calculated by FD3D into MaxwellFDFD for further analysis. FD3D uses the PETSc library for matrix and vector management, and it runs on any LINUX clusters that support MPI communication.

Unlike MaxwellFDFD, FD3D solves the constructed system of linear equations by Krylov iterative solvers rather than direct solvers to avoid large memory consumption. Using the various techniques developed throughout my Ph.D. research, FD3D achieves more than 300-fold speedup compared with conventional iterative solvers of the frequency-domain Maxwell's equations.
